

CSRD Roadshow

INFRASTRUCTURE

CSRD in short

Although the precise contents of the guideline are still indistinct, the core is clear. Companies will have to take drastic responsibilities for what happens in their chain. The aim is for them to invest more consciously and thus contribute to a green, fair world where it is sustainable to live and work for everyone. Reporting on Sustainability goals is new for many companies and informationsystems are often not yet set up for it. The CSRD roughly comprises three pillars: 'Environment', 'Social' and 'Governance'. Abbreviated as ESG.

The EU directive requires companies with an annual turnover of €40 million to report on the ESG themes most relevant to them. The larger the company, the greater the reporting burden. Reporting consists of 17 Sustainable Development Goals: →

But the guideline is also a fantastic tool on the road to Sustainability for smaller organizations!

PARTNERSHIP TO ACHIEVE OBJECTIVES

NVDO, EFNMS and Sdu make the CSRD guideline attractive!

What is the CSRD? How does this affect you, your maintenance team and your business? But above all: what do you get out of it? We answer these questions in the Roadshow, focussed on the sectors Infrastructure, Built Environment, Process Industry and Manufacturing.

CSRD Roadshow INFRASTRUCTURE

1 Februari 2024

Location: Online

Time: 12.55-14.00 CET

Speakers

CSRD in short

Chantal de Groot, Accountmanager, Sdu

The European CSRD directive, which focusses on materials testing, and the associated standards, the so-called ESRS, will be introduced from 1 January, 2024. But, what is the CSRD? Who will this apply to and when? What should you do? And how do you ensure that you are compliant in the Infrastructure sector? Learn from Sdu!

Integrated Asset Management in the Midstream of Gas

Claudio Rodríguez Suarez, Gas Assets General Manager, Enagás

Enagás has more than 50 years experience in the operation and maintenance of natural gas transmission networks, regasification terminals and underground storage facilities. Their implementation is aligned with Asset Management standard ISO 55001. Criteria as effectiveness, efficiency and risk management are very important to ensure availability and cost optimisation. Learn how Enagás guarantees sustainability and a green future according to the REPOWER UE challenges.
