

Looking forward to EuroMaintenance 2026

Make sure to clear your calendar for a tour to Sweden in March 2026! The EFNMS bi-annual congress will once again bring you insights and network from the top-level experts in maintenance and asset management.

The Swedish Maintenance Society has for this edition chosen a clear focus on how maintenance of physical assets may affect sustainability.

Participants will be able to explore and discuss maintenance actions and strategies that will both keep assets useful longer but also reduce usage of water and energy. A key factor in enabling such actions is good focus on our human resources, so let us also take a dive in how to find, develop, and care of skilled personnel.

- *We will listen to plenty of good use cases and sharp insights from exceptional maintenance professionals, including award winners' stories and their advice for future success.*

The congress program aims to be as wide as ENFMS! A good mix that inspires with stories and insights from different angles but same focus. The event also offers plenty of opportunities to discuss and meet with fellow colleagues and companies showcasing in the exhibition area.

Make sure to follow our [LinkedIn](#) for updates & discussions.

Ticket sales start in August. General information is found at: www.EuroMaintenance.se
